1/

INFORMATION

A tailored leather garment is more comfortable and safer than a standard one in case of accident. Protection pads fit the body perfectly and don't move. Leather suits are high performance, long lasting, techno-garments and are not designed to be "normal" and/or seasonal items of clothing.

Gimoto also has an efficient after sales service dealing with all requests and repairs.

TAILORED GARMENTS: suits are manufactured on the basis of the customer's body measures in order to be more comfortable and safe and for the protection pads to be located in the right positions.

2/

2.A MEASUREMENTS.

STANDARD SIZED TRY-ON AND TAKING MEASUREMENTS.

Communicating the right measures of your body means first of all an optional try on a standard size of the chosen model according to the procedure detailed in Annex 2. Standard sizes try-on procedures shall lead to all differences between the sample garment and your body. In order to identify the correct standard size to be tried on, you just need to measure the your chest and divide such result by 2 (see table in Annex 1). If possible, please attach a picture of yourself wearing a standard sample suit.

2.B TAKING MEASUREMENTS.

A video currently available on-line provides a detail of how to take measures of each relevant area of the body properly. Measures shall be filled into the form provided in Annex 2.

- Wear an undersuit while taking the measurements.
- Take measures with a help of a third person.
- In case you are in doubt, repeat measurements.
- Measures are to be taken without the back pad and the ribs protection.

Please notify Gimoto which protection devices you use. Furthermore notify the company in case the customer uses special protection devices (such as: joints supports etc...)

- Measures shall not be too broad or too tight.
- Pay attention not to accidentally twist the meter.
- A picture of you wearing the undersuit might be useful as well. If possible, attach it to the order.

3/

HOW TO SELECT COLOURS, OPTIONALS AND PLACING ORDERS.

Using the dedicated on-line software, you are able to pick your favourite colours and other different options.

STEP 1 Colour selection

STEP 2 Accessories

STEP 3 Name

STEP 4 Logos

STEP 5 Copy the measures filled in the paper form

STEP 6 Options

STEP 7 Enter data, save and forward (print out)

FORWARDING AN ORDER

The last step of the software allows you to save and send the chosen configuration. After saving the file together with your name, a PDF file will be automatically generated. Send it in along with all annexes and notes.

Gimoto will contact you within the next 24 hours with a confirmation of your order, containing the price, the shipping date and a summary of your data.

4/

ORDER CONFIRMATION.

After receiving your order, the company will send a quotation with a possible shipping date.

Since we are talking about custom tailored garments it will be necessary to deposit a percentage of the price.

The order shall be forwarded to the production department only after you have confirmed it and the advance payment is received. Should such confirmation not be sent to the company the order shall remain on standby. After your suit is finished you will be contacted from Gimoto for the remaining payment. As soon as it is received Gimoto will ship your suit to the address you provided.

5/

DELIVERY.

After delivery of your suit try it on, noting the following suggestions.

Suggestions:

Suits shall be tried on preferably on top of a technical undersuit and when wearing a back protector. Trying on a tailored leather suit might be very difficult without an undersuit.

Tailored garments might fit a little tight when worn for the first time, especially for customers who have never tried on a proper one. Move a little to let the suit adjust onto your body.

After being used regularly, leather adjusts to the body fitting it perfectly.

Should any problems arise, don't hesitate to contact Gimoto providing pictures and evidences so that modifications might be made after the first delivery.

Any possible after sale service interventions and repairs concerning the garments are to be quoted after notifying Gimoto and receiving their feedback thereof.
